

**TO:** All Nemaha County Hospital Team Members  
**FROM:** Marty Fattig  
**DATE:** August 19, 2020  
**RE:** Daily COVID-19 Update

Good morning and thanks for reading this update. The Southeast District Health Department has a new way of sharing their data with the public that I was unaware of so I did not give you the latest updates yesterday. We now have an additional four cases in Johnson County, five additional cases in Nemaha County, eight additional cases in Otoe County and three additional cases in Richardson County. This makes a total of 174 cases and one death in the district.

When I look at the data for Nebraska on the Johns Hopkins website something is terribly wrong. Nebraska shows less cases in the state than there have been in four days and every county in Nebraska shows the same thing. Because of this, I am not sharing any data with you today because I don't want to risk sharing bad data. I will see if this problem corrects itself tomorrow.

I apologize for not giving you much information today but everything I know is available to you through the news media. I hope I have more to share tomorrow.

Thanks for all you do for us! Be kind to each other!
